

# The Leading Fisheries Management and Electronic Reporting Platform

FisheriesApp is a cost-effective fisheries management and electronic reporting platform for collecting, reporting, and analyzing fisheries catch and landing data. FisheriesApp is used by harvesters, processors, enumerators, observers, scientists and other stakeholders to get fishery information into the connected world.

**FisheriesApp comes equipped with a full complement of back office data management tools for reviewing, analyzing, and exporting catch and landing event details for fishing industry stakeholders such as license holders, regulators, and NGOs. It is highly configurable, simple to deploy, and tailored for a strong user experience regardless of fishery size or complexity.**

## Core Features

- Configuration support for a wide variety of fisheries such as oceans, lakes, rivers, and aquaculture
- Collect now, report later – smartphone or tablet offline mode for limited or no internet connectivity
- Analytics suite and full data views with search and filtering for on the go fisheries management and operations including at a glance dashboard key performance indicators – how is my fishery doing right now?
- Data submission review and validation tools – allows for third party verification of submitted harvest data
- Configurable core and custom form library to capture harvest data on distinct aspects of your fishery including (but not limited to) target species and bycatch definitions, gear type, vessel, fishing area, season/opening management, and allocation and quota management
- Tie in with on-board vessel systems via VMS, and other GPS based technology, for live and historical vessel track path analysis and review
- End-to-end supply chain transparency – integrates with Vericatch's KnowYour.Fish traceability and sustainability platform

## Additional Features

- Custom role definitions for scenarios beyond typical fisherman and monitor based electronic reporting
- Security group rights and roles for stakeholder managed data views
- Highly auditable – know who changed what data when
- Multiple language and locale support – deploy for different language needs within the same fishing management area
- CSV data exports
- API support for third party integrations

### END-TO-END HARVEST AND SUPPLY CHAIN TRACEABILITY

By using both FisheriesApp and KnowYour.Fish you can achieve complete traceability within the supply chain to add value and build reputation in new consumer, retailer, and restaurant markets.

### COLLABORATION

Vericatch works with leading NGOs and regulators to make a tangible change in the future of fisheries and the fishing industry. Having the support and expertise of world-renowned organizations helps ensure that our solutions are meeting the needs of fisheries and contributing to current and future sustainability goals.

### ABOUT VERICATCH

Vericatch is a Vancouver, Canada based company founded in 2006 to help fishermen report and utilize catch data. Today, our products are deployed in many countries across many different types of fisheries. Our team's diverse fishing, technology, and business backgrounds add experience and perspective to the solutions we provide our customers.
